Aerospace Engineering Student at Chungnam University, Programming enthusiast, Licensed Aircraft Technician.

Skills & Qualifications

- Certified Aircraft Technician of South Korea
- Experience on disassembling an aircraft
- Awarded for a social data analysis hackerton
- Worked on a miniature satellite

Tech Stack

- **Languages**: Python
- **OS**: Linux
- **Other**: Matlab, Arduino

Work History

Aircraft Disassembly | Korean Air A360

07/2021

During covid season, I was lucky enough to get an internship on Disassembling an aircraft of Korean Air.
It was an Airbus 300-600 which was at Korean Air, Gimpo.
The job of disassembling an Aircraft was hard and brutal.
I had to get in the fuel tanks in the wings and use a grinder to cut the bolts in the wings.
But it was a valuable experience and made the ideology inside me to make it a life's mission to help hard-working technicians.

Education

Inha Technical College | A.S Aeronautical & Mechanical

03/2018 – 03/2022

During my degree at one of the most prestigious community colleges in South Korea I learnt lots of key skills such as teamwork and fixing problems. Although we mainly focused on maintaining the airworthiness of the aircraft, I use a lot of these skills to my advantage in my journey on become an Aerospace Engineer.

While at Inha Tech I got a lot of licenses and studied hard to get the valedictorian certificate.

Chungnam University | B.S Aerospace Engineering

03/2022 - 03/2025

Still trying hard to graduate!
